Application Engineer responsibilities include (not limited to):

- Create Automatic Temperature Controls drawings (ACAD) and submittals per contract documents.
- Create control programs and system graphics per contract documents.
- Select product types, sizes, and locations per contract documents.
- Provide assistance with project start-up, checkout, turnover, and customer training.
- Maintain documentation throughout project.

Application Engineer Qualifications:

- 3+ yrs. experience in application engineering, design, and programming HVAC Automation Temperature Control Systems.
- Strong knowledge of HVAC equipment and Automatic Temperature Controls concepts and applications.
- Excellent communication skills.
- Self-motivated and can work independently or as a team member.

Technician (New Construction) responsibilities include (not limited to):

- Perform job start up, checkout, and troubleshooting for new construction and renovation projects. Assist with service work as needed.
- Provide guidance and coordination to contractors, perform wiring checkout and assist in automation system start-ups and commissioning.
- Edit/troubleshoot Automatic Temperature Controls programming per job requirements.
- Complete adjustments and calibrations and submit commissioning reports on automation systems.

Technician (Service) responsibilities include (not limited to):

- Interface with customers and contractors to repair and maintain service customer's Automation Temperature Controls system for proper operation.
- Respond to customer service calls (emergency, on-site, or on-line) to troubleshoot and repair control devices and systems.
- Perform system preventative maintenance, job start-up, inspection, final adjustments and calibration/troubleshooting for service contracts and service-installed jobs.
- Document services provided to customer and forward to office.

Technician Qualifications:

- 3+ yrs. experience in Commercial Automatic Temperature Controls and Mechanical systems.
- Strong troubleshooter in Commercial Automatic Temperature Controls Mechanical HVAC equipment.
- Strong knowledge of controls wiring and Basic electricity.
- Must have computer user experience (Word and Excel) and the ability to troubleshoot/edit control programs.
- Ability to repair and set-up computers is preferable.
- Self-motivated and can work independently or as a team member.
- Good communication skills.
